OTROS DATOS

Combine an elevated luminous flux with an excellent visual comfort: this is the virtue of Duomo. Its recessed LED and its optical glass lense reduce the luminaires UGR value and its ant-glare lampshade diminishes reflections. Duomo is convenient for applications with big ceiling heights and projects with high light level requirements. Conceived to cover demands of general lighting, its conical light distribution offers a very uniform lighting.

For some of its products, Arkoslight offers the possibility to provide them with a special LED, designed to create an illumination focused on visually promoting goods or products for commercial purposes. It is a high chromaticity LED, capable of identifying the colour shades that produce a positive psychological perception of the illuminated object.

This special LED lighting source offers a much more attractive and intense colour range than a conventional LED, besides being much wider. Technically, this is possible thanks to a special LED setting that includes a «special saturation parameter», capable of highlighting the objects colours and materials in such a way that they seem more attractive within the visible light spectrum. To achieve this performance, in each case, the appropriate diode and specific phosphor coating are carefully selected.
